Automatic Weld Size (A.W.S) Weld Gauge

## Automatic Weld Size (A.W.S) Weld Gauge

A.W.S. Type Gauge. Automatic weld size weld gauge for accurate calibrations of butt and fillet type welds. With the A.W.S Type Gauge it is possible to meet specifications of butt and fillet type welds. The following diagrams illustrate the ease with which welders and inspectors may accurately check sizes of convex or concave fillets as well as butt weld reinforcements.

The convexity and concavity sizes have automatically been determined in accordance with American Welding Society D1.1 Paragraph 3.6. The gauge is built of stainless steel with dimensional readings chemically etched and filled for easier reading.

□ To check the permissible tolerance of convexity. With the new improved A.W.S. Gauge you can meet specifications of butt and fillet type welds.

□ New redesigned instrument is pocket size and easy to operate. New feature includes thumb screws which replace old hard to operate rivet types.

□ Welders and inspectors may accurately check size of convex or concave fillets as well as butt weld reinforcements.

□ The convexity and concavity size have automatically been predetermined in accordance with American Welding Society D1.1 Paragraph 3.6.

□ Instrument is precision built of stainless steel with dimensional readings chemically etched and filled for easier reading.
